

Veyrion Workspace

READ. EDIT. ORGANIZE. CREATE.

A universal document workspace. Open PDF, EPUB, DOCX, Markdown, comic archives, images and more, then read, annotate, edit, search, convert, compare, present and protect them without leaving the application.

Try this:

- Ctrl+K the command palette, for anything you cannot find
- Ctrl+O open a document
- Ctrl+F search inside the current document
- Select text to highlight, annotate, translate or look it up
- Drag a file onto the window to open it in a new tab

Everything stays on this machine. No account, no telemetry, and no network request unless you explicitly ask for one.
